Carboxyethyllysine in a protein: native carbonyl reductase/NADP(+)-

dependent prostaglandin dehydrogenase.";

Proc. Natl. Acad. Sci. U.S.A. 90:502-506(1993).

-I- FUNCTION: CATALYZE THE REDUCTION OF A WIDE VARIETY OF CARBONYL

COMPOUNDS INCLUDING THE ANTITUMOR ANTHRACYCLINE ANTIBIOTICS.

CAN CONVERT PROSTAGLANDIN EZ TO PROSTAGLANDIN EZ-ALPHA.

-I- CATALYTIC ACTIVITY: R-CHOH-R' + NADP(+) = R-CO-R' + NADPH.

-I- CATALYTIC ACTIVITY: (5Z,13E)-(15S)-9,11,15-trihydroxy-9-oxoprosta-

-i- CATALYTIC ACTIVITY: (5Z,13E)-(15S)-11,15-dihydroxy-9-oxoprosta-

-i- CATALYTIC ACTIVITY: (5Z,13E)-(15S)-11,15-dihydroxy-9-oxoprosta-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      dehydrogenase enzymes catalyse an irreversible reaction between pyruvate and coenzyme A, to form CO2 and the intermediate COA, in mitochondria. Host cells containing vectors comprising the HSCD nucleic acid may be used to produce the HSCD enzyme, according to standard recombinant DNA methodology. The enzyme may then be used as an antigen in the production of antibodies or in assays to identify antagonists of HSCD activity. These antagonists may then be used to treat disorders associated with inappropriate expression, or over activity of HSCD such as immune disorders and coenzyme A). For example, the antagonists may be used to treat leukemia, lymphomas, adenocarcinomas and cancers of the breast, lung, testis, prostate and brain, Addison's disease, acquired in mene deficiency syndrome (AIDS), asthma, anemia, Crohn's disease and coraves disease. The nucleic acids and antisense sequences can be used to mene thereave.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

CC AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, CC which represent the human ORFX open reading frames 1 to 3161. The ORFX CC sequences have activities such as: cytostatic; hepatotropic; vulnerary; CC antipsoriatic; antiparkinsonian; nootropic; neuroprotective; costeopathic; anticonvulsant; thrombolytic; coagulant; vasotropic; immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; cc antidiabetic; hypotensive; dermatologica; immunosuppressive; cc antityroid; and antianaemic. The sequences can be used for determining cc the presence of or predisposition to, or preventing or treating cc the presence of or predisposition to, or preventing or treating cc nucleic acids can be used to express ORFX proteins in gene therapy cectors. The proteins and nucleic acids may be used to treat cancers, cc proliferative disorders, neurodegenerative disorders, osteoarthritis, cc praft vs host disease, cardiovascular disease, diabetes mellitus, hypothyroidism, cholesterol ester storage, systemic lupus crythematosus, severe combined immunodeficiency (SCID), AIDS, viral, cc allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, cc coagulation; to inhibit thrombosis; and as a contraceptive.

                                                                                                                                                                                                     This invention relates to purified human proteins AAB81047 - AAB81056 which are encoded by cDNA sequences AAF77476 : AAF77485. The invention includes an expression vector which can translate DNA encoding the protein or express it in a cell. Also included is a cell transformed by the vector, and an antibody specific for the protein. The protein can be used for the detection of receptors and ligands and in the screening for new low molecular weight drugs. The present sequence represents the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; HP00758; low molecular weight drug.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              õ
                                                                      AAH32522-AAH32627 represent cDNAs corresponding to 35 human secreted protein genes, and AAG73346-AAG73448 represent the proteins they encode. AAG73449-AAG73519 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 52 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nucleic acids encoding 35 human secreted polypeptides, useful for preventing, diagnosing and/or treating e.g. cancers, Parkinson's disease and diabetic retinopathy -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Parkinson's disease; cognitive disorder; schizophrenia; asthma; skin disorder; psordasis; sepsis; diabetes; atherosclerosis; skin disorder; angiogenic disorder; kidney disorder; cardiovascular disorder; angiogenic disorder; kidney disorder; angiogenic disorder; kidney disorder.

The proteins can also be used to aid wound CC sunburn, to maintain organs before transplantation, for supporting cell CC culture of primary tissues, to regenerate tissues, to identify their CC cognate ligands or binding partners, and in chemotaxis, and can be used CC as a food additive or preservative to modify storage properties. CC alleviating symptoms associated with the disorders mentioned above, and communosorbent assay (ELISA). The present sequence represents a human ver construction of the invention can be used to communosorbent assay (ELISA). The present sequence represents a human ver construction of the invention can be used to communosorbent assay (ELISA). The present sequence represents a human ver construction of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

AAH32522-AAH32627 represent cDNAs corresponding to 35 human secreted CC protein genes, and AAG73346-AAG73448 represent the proteins they encode. CC AAG73449-AAG73519 represent human secreted proteins are useful for preventing, cc treating or ameliorating medical conditions, e.g., by protein or genee CC amount of the new protein in a sample or by determining the CC amount of the new genes. Specific uses are described for each of the CC and include developing products for the diagnosed by determining the CC and include developing products for the diagnosis or treatment of CC and include developing products for the diagnosis or treatment of CC abnormalities, haematopoietic disorders, diseases of the immune system, cancer, tumours, foetal and developmental CC abnormalities, haematopoietic disorders, diseases of the immune system, can also represent the companies of the immune system, can disorders (e.g., Alzheimer's disease, cancer, tumours, foetal and developmental cC allergies, neurological disorders (e.g., Alzheimer's disease, candiovascular disorders, pregnancy-related disorders, atherosclerosis, candiovascular disorders, pregnancy-related disorders, and infections. The proteins can also be used to aid wound the protein and infections. The proteins can also be used to aid wound constant proliferation, to prevent skin aging due to constant ligands or binding partners, and in chemotaxis, and can be used to aid antibodies specific for a protein of the invention can be used in diagnostic immunoassays e.g., radiommunoassay or enzyme linked cc inmunoassays e.g., radiommunoassay or enzyme linked cc immunoassays e.g., radiommunoassay or enzyme linked cc secreted protein fragment referred to in the discreers a human such and can be used in induspriate protein fragment referred to in the discreers a human such and can be used in induspriate protein assay (ELISA). The present sequence represents a human such assay (ELISA). The present sequence of the invention.

CC and their corresponding secreted proteins are useful for preventing.

CC treating or ameliorating medical conditions, e.g., by protein or gene

CC therapy. Pathological conditions can be diagnosed by determining the

CC amount of the new protein in a sample or by determining the presence of

CC mutations in the new genes. Specific uses are described for each of the

CC genes, based on the tissues in which they are most highly expressed,

CC and include developing products for the diagnosis or treatment of

CC proliferative disorders, cancer, tumours, foetal and developmental

CC and include developing products for the diagnosis or treatment of

CC proliferative disorders, cancer, tumours, foetal and developmental

CC allergies, neurological disorders (e.g., Place arthritis), inflammation,

CC allergies, neurological disorders (e.g., Alzheimer's disease,

CC parkinsons's disease), cognitive disorders, schizophrenia, asthma,

CC parkinsons's disease), cognitive disorders, schizophrenia, asthma,

CC gastrointestinal disorders, pregnancy-related disorders, endocrine

CC disorders, and infections. The proteins can also be used to aid wound

CC disorders, and infections. The proteins can also be used to aid wound

CC culture of primary tissues, to regenerate tissues, to identify their

CC cognate ligands or binding partners, and in chemotaxis, and can be used

CC alleviating symptoms associated with the disorders mentioned above, and

CC alleviating symptoms associated with the disorders mentioned above, and

CC alleviating symptoms associated with the disorders mentioned above, and

CC alleviating symptoms associated with the disorders mentioned above, and

CC alleviating protein fragment referred to in the disclosure of the invention.

                                                                               CC to the 5602 nucleotide sequences defined in the specification, where the CC oligonucleotide comprises at least 15 nucleotides; or (b) a combination CC of an oligonucleotide comprises at least 15 nucleotides; or (b) a combination CC of an oligonucleotide comprising a sequence complementary to the CC complementary strand of a polynucleotide which comprises a 5'-end CC complementary to a combination CC complementary strand of a polynucleotide which comprises a 5'-end sequence complementary to a CC polynucleotide which comprises a 3'-end sequence complementary to a CC configuration of the 5'-end sequence/3'-end sequence is selected from those defined in CC the 5'-end sequence/3'-end sequence is selected from those defined in CC in gene therapy. The primers are useful for synthesising polynucleotides, CC particularly full-length cDNAs. The primers are also useful for the CC in gene therapy and comprise of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length CDNAs easily without any specialised methods. AAH33162 to AAH3363 to AAH318742 represent human cDNA sequences; AAB92446 to CC captesent oligonucleotides, all of which are used in the exemplification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ota T,

                                                                                                                                                                      The invention relates to gene encoding D-arabinitol dehydrogenase, isolated from Bacillus sp. IKD-5A868 strain. The protein can be expressed by standard recombinant methodologies. D-arabinitol dehydrogenase is used as a clinical diagnosing agent for mycosis. The present sequence represents the D-arabinitol dehydrogenase enzyme.
                                                                                                                                       Sequence

                                                           AAH32522-AAH32627 represent cDNAs corresponding to 35 human secreted protein genes, and AAG73346-AAG73448 represent the proteins they encode. AAG73449-AAG73519 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the protein or sample or by determining the formutations in the new genes. Specific uses are described for each of the and include developing products for the diagnosis or treatment of and include developing products for the diagnosis or treatment of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cardiovascular disorders, angiogenic disorders, kidney disorders, gastrointestinal disorders, prepanarcy-related disorders, endocrine disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and indiagnostic immunoassays e.g., rith the disorders mentioned above, and indiagnostic immunoassays e.g., rith the greener seguence represents a human secreted protein fragment referred to in the disclosure of the invention.

Disclosure; Page 47; 604pp; English.

CC AIDS, autolumne diseases (e.g., rheumatoid arthritis), inflammation, (C allergies, neurological disorders (e.g., Alzheimer's disease, eurological disorders (e.g., Alzheimer's disease, cognitive disorders, schizophrenia, asthma, cc skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cc cardiovascular disorders, angiogenic disorders, kidney disorders, cc cardiovascular disorders, angiogenic disorders, kidney disorders, cc disorders, and infections. The proteins can also be used to aid wound chealing and epithelial cell proliferation, to prevent skin aging due to culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used cas a food additive or preservative to modify storage properties. CC antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and can decrease in the disorders mentioned above, and continuous corrected protein fragment referred to in the disorders mentioned above a munosorbent assay (ELISA). The present sequence represents a human cc secreted protein fragment referred to in the disclosure of the invention. AAH32522-AAH32627 represent cDNAs corresponding to 35 human secreted protein genes, and AAG73346 AAG73448 represent the proteins they encode. AAG73449-AAG73519 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 52 genes, based on the tissues in which they are most highly expressed, and include developing products for the disposis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, proteins they encode.
fragments. The derry

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             constituting Type II fatty acid synthase, or acetoacetyl-CoA reductase constituting the polybeta-hydroxy fatty acid biosynthesis system. The novel method is used to produce optically active 4-haol-3-hydroxybutyric acid ester, with a high purity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           08-MAY-1998;

The inventiuseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL305737-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The sequence data specification, but

A plastid stroma targeting transit peptide is present. DNA encoding the protein may be inserted in a vector or expression cassette in sense or antisense orientation for expression in an oilseed plant, e.g. for production of transgenic rape plants with low or modified oil content, diversion of metabolism to alternative storage compounds, e.g. starch, protein or engineered polymers, or production of plants with enhanced oil content. The DNA may also be used as a probe to obtain similar genes from other plants. The transit peptide may be used to direct other proteins to leaf
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Key

밁 Ş 문 Š 문 ş Query Match Best Local S Matches 75 The sequence corresponds to a rape seed beta-ketoreductase encoded by a cDNA insert in plasmid pJRS10.1 in Escherichia coli XLI-Blue. A plastid stroma targeting transit peptide is present. DNA encoding the protein may be inserted in a vector or expression cassette in sense or antisense orientation for expression in an cissed plant, e.g. for production of transgenic rape plants with low or modified oil content, diversion of metabolism to alternative storage compounds, e.g. starch, protein or engineered polymers, or production of plants with enhanced oil content. The DNA may also production of plants with enhanced oil content. No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   protein search, using sw model

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          유
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        용
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This represents a human short-chain dehydrogenase (HSCD) enzyme. The CC dehydrogenase enzymes catalyse an irreversible reaction between pyruvate and coenzyme A, to form CO2 and the intermediate COA, in mitochondria. CC Host cells containing vectors comprising the HSCD nucleic acid may be used to produce the HSCD enzyme, according to standard recombinant DNA CC methodology. The enzyme may then be used as an antigen in the production of antibodies or in assays to identify antagonists of HSCD activity. CC Inappropriate expression, or over activity of HSCD such as immune CC disorders and cancers (the antagonist interferes with the reaction CC used to treat leukenia, lymphomas, adenocarcinomas and cancers of the breast, lung, testis, prostate and brain, Addison's disease, acquired CC immune deficiency syndrome (AIDS), asthma, anemia, Crohn's disease and CC craves disease. The nucleic acids and antisense sequences can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

                                                                                                                                                                                                                                                                                                                     AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB4397, which represent the human ORFX open reading frames I to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; continuous that it is antiparkinsonian; nootropic; neuroprotective; contemporatinic; anticonvulsant; antiarthritic; immunosuppressant; cimmunostimulant; cardiant; thrombolytic; coagulant; vasotropic; contidiabetic; hypotensive; dermatological; immunosuppressive; contitionatory; antibacterial; antivital; antifungal; antirheumatic; contitionatory; antibacterial; antivital; antifungal; antirheumatic; contitionatory; antibacterial; antivital; antifungal; antirheumatic; contitions associated with an ORFX-associated disorder. The presence of or predisposition to, or preventing or treating conticed; acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, concleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, confit vs host disease, cardiovascular disease, diabetes mellitus, collesterol ester storage, systemic lupus crythematosus, severe combined immunodeficiency (SCID), AIDS, viral, collesterial or fungal infection, malaria, autoimmune disorders, asthma, conternal haemoglobinuria, antiinflammatory disease; to enhance consulation; to inhibit thrombosis; and as a contraceptive.

                                                                                                                                                                                                                                                                                     This invention relates to purified human proteins AAB81047 - AAB81056 which are encoded by CDNA sequences AAF77476 - AAF77485. The invention includes an expression vector which can translate DNA encoding the protein or express it in a cell. Also included is a cell transformed by the vector, and an antibody specific for the protein. The protein can be used for the detection of receptors and ilgands and in the screening for new low molecular weight drugs. The present sequence represents the protein product of the human cDNA clone HP00758.

CC proliferative disorders, cancer, tumours, footal and developmental CC abnormalities, haematopoietic disorders, diseases of the immune system, CC allergies, neurological disorders (e.g., Alzheimer's disease, CC allergies, neurological disorders (e.g., Alzheimer's disease, CC parkinsons's disease), cognitive disorders, schizophrenia, asthma, CC skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, CC cardiovascular disorders, pregnancy-related disorders, endocrine CC disorders, and infections. The proteins can also be used to aid wound the comburn, to maintain organs before transplantation, for supporting cell CC culture of primary tissues, to regenerate tissues, to identify their CC cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties. CC antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and cin diagnostic immunoassays e.g., radioimmunoassay or enzyme linked conscribed protein of the invention can be used in the invention can be used in the invention can be used in the combusting symptoms associated with the disorders mentioned above, and considered protein of the invention can be used in the invention can be used in the constant of the invention can be used in the constant of the invention can be used in the constant of the invention can be used in the constant of the invention can be used in the constant of the invention can be used in the constant of the invention can be used in the constant of the invention can be used in the constant of the invention can be used in the invention can be used in the constant of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             inflammation; uevelopmental abnormality; haematopoletic disorder; inflammation; allergy; neurological disorder; Alzheimer's disease; parkinson's disease; cognitive disorder; Alzheimer's disease; skin disorder; psoriasis; sepsis; diabetes; atherosclerosis; cardiovascular disorder; angiogenic disorder; kidney disorder; gastrointestinal disorder; pregnancy-related disorder; tumour; endocrine disorder; infection; wound healing; vulnerary; binding partner identification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 52 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAH32522-AAH32627 represent cDNAs corresponding to 35 human secreted protein genes, and AAG73346-AAG73448 represent the proteins they encountries are protein fragments. The general protein fragments are general protein fragments.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nucleic acids encoding 35 human secreted polypeptides, useful for preventing, diagnosing and/or treating e.g. cancers, Parkinson's disease and diabetic retinopathy -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 11;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          N-PSDB;

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprises a 3'-end sequence complementary to the polynucleotide which comprises a 3'-end sequence where the oligonucleotide which comprises a 1'-end sequence, where the oligonucleotide which comprises a 1'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in
                                                                                                                                                                                                                                                                                                                                                                                 29-JUL-1999;

The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13632 to AAH13632 represent oligonucleotides, all of which are used in the exemplification

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, allergies, neurological disorders (e.g., Alzheumer's disease, CParkinsons's disease), cognitive disorders, schizophrenia, asthma, compared the schizophrenia asthma, compared the schizophrenia, and infections. The proteins can also be used to aid wound compared the schizophrenia, to prevent skin aging due to compare it schizophrenia, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used compared the specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and companied in the secreted protein fragment referred to in the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC AAH32522-AAH32627 represent cDNAs corresponding to 35 human secreted CC protein genes, and AAG73346-AAG73448 represent the proteins they encode. AAG73449-AAG73519 represent human secreted protein fragments. The genes CC and their corresponding secreted proteins are useful for preventing, CC treating or ameliorating medical conditions, e.g., by protein or gene CC therapy. Pathological conditions can be diagnosed by determining the CC amount of the new protein in a sample or by determining the presence of CC mutations in the new genes. Specific uses are described for each of the C2 genes, based on the tissues in which they are most highly expressed, CC and include developing products for the diagnosis or treatment of C2 genes, based on the tissues in which they are most highly expressed, CC annualities, haematopoietic disorders, diseases of the immune system, CC alpropriative disorders, schizophrenia, asthma, CC allergies, neurological disorders (e.g., Alzheimer's disease, CC antionascular disorders, anglogenic disorders, schizophrenia, asthma, CC cardiovascular disorders, anglogenic disorders, kidney disorders, gastrointestinal disorders, anglogenic disorders, kidney disorders, endocrine CC disorders, and infections. The proteins can also be used to aid wound the healing and epithelial cell proliferation, to prevent skin aging due to culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chenotaxis, and can be used as a food additive or preservative to modify storage properties.

CC antibodies specific for a protein of the invention can be used in disgnostic immunoassays e.g., radioimmunoassay or enzyme linked cindunoscophent assay (ELISA). The present sequence represents a human secreted protein fragment referred to in the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                            CC protein genes, and AAG73346-AAG73448 represent the proteins they encode. CC AAG73449-AAG73519 represent human secreted protein fragments. The genes CC and their corresponding secreted proteins are useful for preventing, cc treating or ameliorating medical conditions, e.g., by protein or gene CC therapy. Pathological conditions can be diagnosed by determining the cc amount of the new genes specific uses are described for each of the CC amount of the new genes specific uses are described for each of the CC and include developing products for the diagnosis or treatment of CC and include developing products for the diagnosis or treatment of CC and include developing products for the diagnosis or treatment of CC allergies, neurological disorders, classes of the immune system, and include diseases (e.g., rheumatoid arthritis), inflammation, CC allergies, neurological disorders, classes of the immune system, cc allergies, neurological disorders, schizophrenia, asthma, CC skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, CC parkinsons's disease), cognitive disorders, schizophrenia, asthma, CC sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their CC cognate ligands or binding partners, and in chemotaxis, and can be used to ald mumosorbent assay (ELISA). The present sequence represents a human cCC allerylating symptoms associated with the disorders mentioned above, and communoassays e.g., radioimmunoassay or enzyme linked cCC immunoassays (ELISA). The present sequence represents a human cCC immunoassay (ELISA). The present sequence represents a human cCC immunoassay (ELISA). The present sequence represents a human cCC immunoassay (ELISA). The present sequence represents a human cCC immunoassay or the protein in the discorder content of the invention.

cc and their corresponding secreted proteins are useful for preventing, ct treating or ameliorating medical conditions, e.g., by protein or gene ct therapy. Pathological conditions can be diagnosed by determining the camount of the new protein in a sample or by determining the presence of cc amount of the new genes. Specific uses are described for each of the cs 2 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of cc proliferative disorders, cancer, tumours, foetal and developmental can abnormalities, haematopoietic disorders, diseases of the immune system, altergies, neurological disorders (e.g., Alzheimer's disease, cancer stumours, foetal and developmental cc allergies, neurological disorders (e.g., Alzheimer's disease, cc ardiovascular disorders, cognitive disorders, schizophrenia, asthma, cc ardiovascular disorders, programs, schizophrenia, asthma, cc ardiovascular disorders, pregnancy-related disorders, endocrine cd disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used to Althodies specific for a protein of the invention can be used in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked cl immunoaschent assay (ELISA). The present sequence represents a human cc secreted protein fragment referred to in the discrets a the invention.

       CC AAH32522-AAH32627 represent cDNAs corresponding to 35 human secreted CC protein genes, and AAG73346-AAG73448 represent the protein they encode. CC AAG73449-AAG73519 represent human secreted protein fragments. The genes CC treating or ameliorating medical conditions, e.g., by protein or gene CC treating or ameliorating medical conditions, e.g., by protein or gene CC thrappy. Pathological conditions can be diagnosed by determining the genes, based on the new genes. Specific uses are described for each of the CC amount of the new genes. Specific uses are described for each of the CC amount of the new genes. Specific uses are described for each of the CC and include developing products for the diagnosis or treatment of CC and include developing products for the diagnosis or treatment of CC proliferative disorders, cancer, tumours, foetal and developmental CC abnormalities, haematopoletic disorders, diseases of the immune system, CC allergies, neurological disorders (e.g., Alzhelmer's disease, CC cantiovascular disorders, angiogenic disorders, kidney disorders, atherosolerosis, CC Castrolotestlar disorders, angiogenic disorders, kidney disorders, accorders, kidney disorders, angiogenic disorders, kidney disorders, angiogenic disorders, kidney disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Best Local

                                        disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties.

Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., raddolmmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human secreted protein fragment referred to in the disclosure of the invention.

```

AAH32522-AAH32627 represent cDNAs corresponding to 35 human secreted protein genes, and AAG73448 represent the proteins they encode AAG73449-AAG73519 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing,

Nucleic acids encoding 35 human secreted polypeptides, useful for preventing, diagnosing and/or treating e.g. cancers, Parkinson's disease and diabetic retinopathy -

CC mutations in the new protein in a sample or by determining the CC mutations in the new genes. Specific uses are described for each of the CC 2 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of CC and include developing products for the diagnosis or treatment of CC abnormalities, haematopoietic disorders, diseases of the immune system, allergies, neurological disorders, diseases of the immune system, CC allergies, neurological disorders (e.g., Alzheimer's disease, CC allergies, neurological disorders, e.g., Alzheimer's disease, cognitive disorders, schizophrenia, asthma, CC exidovascular disorders, anglogenic disorders, atherosclerosis, CC skin disorders (e.g., psoriasis), sepsis, disbetes, atherosclerosis, CC disorders, and infections. The proteins can also be used to aid wound CC culture of primary tissues, to regenerate tissues, to identify their CC as a food additive or preservative to modify storage properties. CC antibodies specific for a protein of the invention can be used in diagnostic immunoassays e.g., raddoimmunoassay or enzyme linked immunoassay (ELISA). The present sequence represents a himman cc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent sequences used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            N.B. Pages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present SEQ ID NO:1027 to 1052, 7921 and 7922.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      218 QFKSAFSSAETTELSGKCVVALAT 241

The proteins can also be used to aid wound CC thealing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell CC culture of primary tissues, to regenerate tissues, to identify their CC cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties. CC Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and CC in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked CC immunosorbent assay (ELISA). The present sequence represents a human construction of the invention of the invention of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 52 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAH32522-AAH32627 represent cDNAs corresponding to 35 human secreted protein genes, and AAG73346-AAG73448 represent the proteins they encode AAG73449-AAG73519 represent human secreted protein fragments. The genes

Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the process of the protein in the new genes.
Human; secreted protein; proliferative disorder; cancer; chromosome 14; foetal abnormality; developmental abnormality; haematopoietic disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAH32522-AAH32627 represent cDNAs corresponding to 35 human secreted protein genes, and AAG73346-AAG73448 represent the proteins: they encode. AAG73449-AAG73519 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             preventing, diagnosing and/or treating disease and diabetic retinopathy -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Nucleic acids encoding 35 human secreted polypeptides, useful for preventing, diagnosing and/or treating e.g. cancers, Parkinson's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               12-NOV-1999;
